**DETAILED ACTION**

1. Claims 1-29 are pending in the instant application.

***Election/Restrictions***

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-27, drawn to "detecting a set of preamble sequences", classified in class 375, subclass 147.
  - II. Claims 28-29, drawn to "a code-division multiple access transmitter", classified in class 375, subclass 146.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions of group I and group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different *functions*, or different *effects* (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are unrelated because one (I) provides a method of detecting a preamble, and another (II) provides a transmission having a preamble. Although the transmission from the apparatus of group II may be detected by the method of group I, the transmitter and the method of reception do not depend on each other, and they are each characterized as having a separate status in the art under different classifications.
4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2634

5. Because these inventions are distinct for the reasons given above and the search required for group I is not required for group II, restriction for examination purposes as indicated is proper.
